

Trick or Treat

Aidan went trick or treating. The graph below represents the relationship between the number of houses Aidan knocked on and the amount of candy he got.

Look at the graph and answer the following questions

- How many candies was Aidan getting at each house?
- How many candies were in Aidan's bag as soon as he left house 5?
- Extend the line to see how many candies Aidan had in his bag before he even started trick or treating. How many were there?
- What do you think Aidan will do with all those candies?
